

ABSTRACT OF THE DISCLOSURE

In order to provide an anisotropic conductive sheet which can be applied
5 to more finely and more narrowly pitched electrodes and also to provide
spring electrodes applied for the anisotropic conductive sheet, the spring
electrodes manufactured as follows. A part having a bending leaf spring shape
is formed out of a monocrystal silicon by anisotropic etching and gold is plated
on the surface of the part so as to obtain a silicon spring electrode 1. The
10 silicon spring electrodes 1 are inserted in through holes formed on a silicone
rubber sheet and fixed to the through holes.
